

Easily Switch from Linear to Pivot Mode

The Valley® Universal linear is designed to be durable and adaptable for swing-around applications. Unlike other swing-around linears, the Valley Universal has the ability to switch automatically between linear mode and pivot mode, allowing you to maximize irrigated land:

## Universal Linear:

- Maximum Length: 1,260' (400 m)
- Span Diameter: 6 5/8"
- Towable Option: Available
- Field Type: Smaller fields on both sides of a ditch/canal
- Water Source: Hose or ditch

## Sprinkler Packages

The Valley Universal Linear has various linear and pivot sprinkler modes to ensure your field receives uniform water application. Each mode offers efficiency that reduces costs. With the support of your Valley dealer, you can choose one sprinkler package for each mode of operation and find the sprinkler package that is best for your field.

### Sprinkler packages must include:

- Hydraulic control valves on each sprinkler
- Solenoids to control both the pivot and linear sprinkler packages

## Control Panels

The Universal linear has two control panel options – the AutoPilot or ClassicPlus.

### AutoPilot Linear

- Configurable for metric or imperial units
- Programs machine speed and water application depth
- Positions the machine in degrees for pivot modes and meters for linear modes
- Precise control in both linear and pivot
- Has percent timers with multiple timer settings
- Controls water pressure, start/stop delays and run time
- Control up to two end guns
- Switches between two pivot modes and two linear modes automatically

## Small Field Options

### Valley Two-Wheel Hose Feed

The Two-Wheel Hose Drag Universal Linear from Valley is an ideal conversion option for fields currently irrigated by flood, drip or solid set. This versatile machine may operate as a standard linear, towable or swing-around.

- Provides coverage for both small and large fields
- Towable from field to field in either forward or reverse
- Below-ground wire, furrow or GPS Guidance
- Maximum Length: 1,260' (400 m)
- Span Diameter: 6 5/8"
- Towable Option: Available

### Valley Two-Wheel Ditch Feed

The Valley Two-Wheel Ditch Feed linear can be used with both permanent ditches and ditches that are installed annually. This linear is ideal for small fields, because it can either be towed or swung around to cover more area. A flexible suction inlet will keep your investment low by fitting nearly any functioning earthen ditch.

- Towable from field to field in either forward or reverse
- Skid-style suction inlet
- Available flow rates of 150 gpm – 1105 gpm (10 lps – 70 lps)
- Below-ground wire, furrow or GPS Guidance
- Maximum Length: 1,260' (400 m)
- Span Diameter: 6 5/8"
- Towable Option: Available
